Polarization but Not Populism Strengthens the Association Between Presidential Election Results and Emotions

Dahjin Kim, Taishi Muraoka, Christopher Lucas,
Jacob Montgomery and Margit Tavits

1 PresidentialElectionsPosts.RData

PresidentialElectionsPosts.RData contains post-level data used in the main analysis.

- `country`: country name.
- `electionname`: election name (country + year).
- `party`: party name.
- `party_country`: party + country.
- `party_election`: party + election name.
- `candidate`: candidate name.
- `win`: dummy indicator of election winners (0 = Lost, 1 = Won).
- `date`: post created date.
- `year`: post created year.
- `yearmonth`: post created year and month.
- `daysinceelection`: number of days since the election.
- `Xl`: pre-election time trend.
- `Xr`: post-election time trend.
- `pre`: dummy indicator of pre-election (0 = Post-election, 1 = Pre-election).

- `post`: dummy indicator of post-election (0 = Pre-election, 1 = Post-election).
- `totalreactions`: total number of reactions.
- `loveprop`: proportion of Love reactions.
- `angryprop`: proportion of Angry reactions.
- `likeprop`: proportion of Like reactions.
- `wowprop`: proportion of Wow reactions.
- `hahaprop`: proportion of Haha reactions.
- `sadprop`: proportion of Sad reactions.
- `careprop`: proportion of Care reactions.
- `populist_present`: dummy indicator of either of the top two presidential parties is a populist (i.e., populist involvement) based on Norris (2019), where a populist party is defined as a populist score greater than 7.5.
- `populist_present80`: alternative dummy for populist involvement based on Norris (2019), where a populist party is defined as a populist score greater than 8.
- `populist_present85`: alternative dummy for populist involvement based on Norris (2019), where a populist party is defined as a populist score greater than 8.5.
- `populist_present90`: alternative dummy for populist involvement based on Norris (2019), where a populist party is defined as a populist score greater than 9.
- `populist_election_average`: average populist score of the top two presidential parties based on Norris (2019).
- `populist_election_difference`: absolute difference in populist scores between the top two presidential parties based on Norris (2019).
- `populist_dummy`: dummy indicator of populist parties based on Norris (2019), where a populist party is defined as a populist score greater than 7.5.
- `populist_continuous`: continuous populist score of parties based on Norris (2019).
- `vp_populist_election_average`: average populist score of the top two presidential parties based on the V-Party (Lindberg et al. 2022).
- `polarization`: euclidean distance of the top two parties in the economic and social/cultural dimension based on Norris (2019).
- `economic_polarization`: ideological distance of the top two presidential parties in the economic dimension based on Norris (2019).

- `social_polarization`: ideological distance of the top two presidential parties in the social/cultural dimension based on Norris (2019).
- `vp_economic_polarization`: ideological distance of the top two presidential parties in the economic dimension based on the V-Party (Lindberg et al. 2022).
- `incumbentparty`: dummy indicator of incumbent parties (0 = Not incumbent, 1 = Incumbent).
- `concurrent`: dummy indicator of concurrent elections (0 = Non-concurrent, 1 = Concurrent).
- `runoff`: dummy indicator of whether the presidential elections were runoff elections or not (0 = Not runoff, 1 = Runoff).
- `semipresidential`: dummy indicator of semi-presidential systems (0 = Not semi-presidential, 1 = Semi-presidential).
- `enc_v1`: effective number of candidates.
- `v2x_libdem`: liberal democracy score based on the V-Dem (Coppedge et al. 2024).
- `marginvictory`: margin of victory.
- `marginvictory_std`: standardized margin of victory.
- `poll_predict_std`: standardized poll prediction.
- `surprise`: extent to which election results were surprising (difference between expected margin in opinion polls and the actual margin of victory).
- `nwords`: total number of words in the post.
- `positive`: number of positive words in the post.
- `negative`: number of negative words in the post.
- `sentiment`: difference in the number of positive and negative words.
- `sentiment_norm`: difference in the number of positive and negative words normalized by total number of words.

2 `SurveyResponses.RData`

`SurveyResponses.RData` contains survey data used in Figure 1 of the main text and Appendix E.

- `gender`: respondent gender.

- **birthyear**: respondent year of birth.
- **age**: respondent age (**birthyear** - 2022).
- **federal.state**: respondent state (numbered by alphabetical order).
- **hispanic**: dummy indicator of respondent ethnicity (0 = Not Hispanic or Latino, 1 = Hispanic or Latino).
- **race**: respondent race (1 = White, 2 = Black or African American, 3 = American Indian or Alaska Native, 4 = Asian, 5 = Native Hawaiian or Pacific islander, 6 = Other).
- **education**: respondent highest level of education (1 = Less than high school diploma, 2 = High school degree or equivalent, 3 = Some college, 4 = Bachelor's degree, 5 = Master's degree, 6 = Doctorate, 7 = Other).
- **education_text**: Other specified.
- **employment**: respondent employment status (1 = Employed full-time, 2 = Employed part-time, 3 = Unemployed (currently looking), 4 = Unemployed (not currently looking), 5 = Student, 6 = Retired, 7 = Self-employed).
- **income**: respondent annual household income (1 = < \$10k, 2 to 9 = \$5k increment, 10 to 14 = \$10k increment, 15 to 17 = \$25k increment, 18 = \$175k - \$249k, 19 = >\$250k).
- **attention1**: first attention screener (all answers should be 3,5).
- **{emotion}_pre**: PANAS battery before the treatment (1 = Very slightly or not at all, 2 = A little, 3 = Moderately, 4 = Quite a bit, 5 = Extremely).
- **voted2016**: dummy indicator of voting in the 2016 US presidential election (0 = Didn't vote, 1 = Voted).
- **votedfor**: candidate voted by respondent (1 = Trump, 2 = Clinton, 3 = Other).
- **votedfor_text**: Other specified.
- **dem**: dummy indicator of respondent partisanship (0 = Republican, 1 = Democrat).
- **polyscale**: respondent political ideology (1 = Extremely liberal, 2 = Liberal, 3 = Slightly liberal, 4 = Moderate, 5 = Slightly conservative, 6 = Conservative, 7 = Extremely conservative).
- **polyscale_forced**: ideology label chosen by moderates (1 = Liberal, 2 = Conservative).
- **attention2**: second attention screener (all answers should be 5,11).
- **reinforce_pol**: treatment reinforcement for the polarization treatment.

- `reinforce_pop`: treatment reinforcement for the populism treatment.
- `{emotion}_post`: PANAS battery after the treatment (1 = Very slightly or not at all, 2 = A little, 3 = Moderately, 4 = Quite a bit, 5 = Extremely).
- `reaction_choice`: respondent choice of Facebook reactions (1 = Like, 2 = Love, 3 = Care, 4 = Haha, 5 = Wow, 6 = Sad, 7 = Angry).
- `manipulation`: treatment manipulation check (Q. Which of the following statements best describe the key feature of the 2016 US presidential election? 1 = Anti-establishment sentiments were at all time high, 2 = Political polarization was at all time high, 3 = Other).
- `manipulation_text`: Other specified.
- `pop`: dummy indicator of treatment assignment (0 = Polarization treatment, 1 = Populism treatment).

3 PresidentialElections.RData

`PresidentialElections.RData` contains data on the results of 57 presidential elections at the level of parties/candidates. This dataset is used in Figure B.1 of Appendix B.

- `pcountry`: country name.
- `electionyear`: year of the election.
- `wiki`: link to the Wikipedia page of the election.
- `ifes`: link to the IFES Election Guide's election page.
- `source`: link to raw data sources of the election (e.g., election commission webpage).
- `candidate`: candidate name.
- `president_party`: party name.
- `date_round1`: date of the first round.
- `vote_round1`: number of votes in the first round by candidate.
- `validvote_round1`: total number of valid votes in the first round.
- `date_round2`: date of the second round.
- `vote_round2`: number of votes in the second round by candidate.
- `validvote_round2`: total number of valid votes in the second round.

- `date_round3`: date of the third round.
- `vote_round3`: number of votes in the third round by candidate.
- `validvote_round3`: total number of valid votes in the third round.

4 `EmotionDifferentElectionsComparison.RData`

`EmotionDifferentElectionsComparison.RData` contains two post-level datasets. The first one is `presidential_toptwo`, which includes post-level data of the top two parties in presidential elections during nonconcurrent presidential and legislative elections. This dataset is used in panel A of Table S.1, Appendix S. The second one is `presidential_legislative_toptwo`, which includes post-level data of the top two parties in presidential elections and the top two parties in legislative elections. This dataset is used in panel B of Table S.1, Appendix S.

- `election`: election name (country name + election year + election type).
- `country`: country name.
- `electionyear`: year of the election.
- `electiontype`: type of the election (Presidential vs. Legislative).
- `datesinceelection`: number of days since the election.
- `party_country`: party name + country name.
- `loveprop`: proportion of Love reactions.
- `angryprop`: proportion of Angry reactions.
- `post`: dummy for post-election (0 = Pre-election, 1 = Post-election).
- `love_country_mean`: average proportion of Love reactions at the country level.
- `loveprop_demean`: proportion of Love reactions demeaned by the average proportion of Love reactions at the country level.
- `angry_country_mean`: average proportion of Angry reactions at the country level.
- `angryprop_demean`: proportion of Angry reactions demeaned by the average proportion of Angry reactions at the country level.

5 PresidentialCountries.RData

PresidentialCountries.RData contains system-level data of 80 countries. `gdp`, `gdppc`, `electoral_democracy`, and `liberal_democracy` are based on the V-Dem (Coppedge et al. 2024). `economic_variance`, `social_variance`, and `average_populism` are based on the Global Party Survey (Norris 2019). This dataset is used in Table S.2, Appendix S.

- `country`: country name.
- `system`: political system of the country (Directly elected presidential system vs. Other).
- `gdp`: average GDP between 2016 and 2021.
- `gdppc`: average GDP per capita between 2016 and 2021.
- `electoral_democracy`: average electoral democracy score between 2016 and 2021.
- `liberal_democracy`: average liberal democracy score between 2016 and 2021.
- `economic_variance`: variance of parties' economic left-right ideologies.
- `social_variance`: variance of parties' social/cultural left-right ideologies.
- `average_populism`: average populist score of parties.
- `average_total`: average number of reactions per post.
- `average_love`: average proportion of Love reactions per post.
- `average_angry`: average proportion of Angry reactions per post.
